### **6077 Tie-Back Assembly Update**

#### **Improved Design**

The 6077-21 Tie-Back cable has been updated. Improvements include the elimination of cable clips and thimble clamp, and the integration of an inline adjustable length cable clamp. This new clamp uses eight bolts to provide a secure termination and allows for cable length adjustment without removal of the clamp from the cable.

Cable installation can be completed much faster than with the previous version, saving you time and money.
